

Functional Processes Cheat Sheet

Business Central operations · Talan Academy

For functional consultants and business users

WHAT'S INSIDE

- BC basics: Role Centers, document shapes, and the posting flow
- Eight core processes, each with a drawn stage-by-stage flow
- Posting impact per process, and go-live checkpoints

00

Business Central basics — before the process pages

Role Center — Your role-specific home screen — the whole point of BC's design is that a salesperson and a bookkeeper see completely different opening screens, tuned to their job.

Card / List / Document — Every screen is one of three shapes: a **Card** (one record, e.g. a customer), a **List** (many records), or a **Document** — a card with lines, like a Sales Order, that moves through a lifecycle from draft to posted.

Tell Me (Alt+Q) — The fastest way to any page, report, or action, by name — faster than any menu, and it works identically no matter which module you're in.

Posting — The one-way action that turns a draft document into a permanent, always-balanced ledger entry. There is no "edit" after posting — only a correcting or reversing entry.

THE ONE FLOW EVERY DOCUMENT FOLLOWS

PROCESS INDEX

Eight processes, each on its own page: stages, where to click (Tell Me), what it posts, and the one mistake to watch for.

01 Order to Cash

02 Procure to Pay

03 Inventory movements

04 Warehouse lite

05 Finance essentials

06 Projects / Jobs

07 Service lite

08 Fixed Assets

01

Order to Cash

Stages

Tell Me pages — Sales Quotes, Sales Orders, Posted Sales Shipments, Posted Sales Invoices, Payment Journals

POSTING IMPACT

Stage	Item	Customer	G/L
Shipment	Yes (-qty)	—	Inventory ↓, COGS ↑
Invoice	—	Yes (open)	Receivables, Sales, VAT
Payment	—	Yes (closes)	Bank/Cash, Receivables clears

COMMON MISTAKE
Combining Ship and Invoice into one posting hides which step actually moved inventory — fine day to day, confusing the first time someone has to explain it.

02 Procure to Pay

Stages

Tell Me pages — Purchase Orders, Posted Purchase Receipts, Posted Purchase Invoices, Payment Journals

POSTING IMPACT

Stage	Item	Vendor	G/L
Receipt	Yes (+qty)	—	Inventory ↑, payables accrual
Invoice	—	Yes (open)	Payables, accrual clears
Payment	—	Yes (closes)	Payables clears, Bank/Cash

COMMON MISTAKE
Trusting a vendor invoice's price without checking the 3-way match against the PO and the receipt — quantities and amounts have to agree across all three.

03

Inventory movements

Stages — Receipt · Issue · Transfer · Adjust · Physical count

Tell Me pages — Item Journals, Transfer Orders, Physical Inventory Journals, Item Ledger Entries

POSTING IMPACT

Movement	Item Ledger	G/L
Receipt / Issue	Yes	Yes — inventory value and COGS/expense
Transfer (ship+receive)	Yes, both locations	Usually none — no P&L impact
Positive/Negative Adjmt.	Yes	Yes — costed at the item's method

COMMON MISTAKE

Posting an adjustment without a Reason Code — the quantity is fixed but the "why" is gone, and it will come up again at the next stock count.

04

Warehouse lite

Stages

Tell Me pages — Warehouse Receipts, Warehouse Shipments, Bin Contents, Whse. Pick/Put-away

POSTING IMPACT

Step	What it actually does
Receive	Physically puts stock in the building — posting the receipt is what makes it a real Item Ledger Entry
Put-away	Moves stock from a receiving dock to a storage bin — an internal movement, not a new quantity
Pick / Ship	Stages stock for an order, then the shipment posts exactly like basic Sales does

COMMON MISTAKE
Assuming directed pick/put-away is needed by default — it's a volume decision. Most warehouses do fine on the basic receive/pick/ship flow.

05

Finance essentials

Stages

Tell Me pages — General Posting Setup, Customer/Vendor Posting Groups, Bank Acc. Reconciliations, Accounting Periods

POSTING IMPACT

Concept	What it controls
Posting groups	Which G/L account family a document hits — must exist and be complete before the first post
G/L Entry	The permanent, always-balanced financial record every document ultimately produces
Bank reconciliation	Matches statement lines to ledger entries — a human reviews only the exceptions

COMMON MISTAKE

An incomplete General Posting Setup combination — by far the most common "why won't this post" ticket in any implementation.

06

Projects / Jobs

Stages

Tell Me pages — Jobs, Job Planning Lines, Job Journals, Job Task Lines

POSTING IMPACT

Stage	Job Ledger	G/L
Usage posted	Yes	WIP or cost recognition, per WIP method
Job sales invoice	Marked billed	Receivables, job/sales revenue, VAT

COMMON MISTAKE

Billing before usage is posted — Create Sales Invoice only pulls usage that’s already posted; unposted time is invisible, not billed at zero.

07

Service lite

Stages

Tell Me pages — Service Items, Service Contracts, Service Orders, Service Invoices

POSTING IMPACT

Element	Posting impact
Spare parts consumption	Hits inventory exactly like any other outbound issue
Service invoice	One Customer Ledger Entry and G/L posting for both labor and parts

COMMON MISTAKE

Forgetting that parts consumption is ordinary inventory movement — service isn't a separate stock universe with its own rules.

08

Fixed Assets

Stages

Tell Me pages — Fixed Assets, FA Journals, FA Depreciation Books, FA G/L Journals

POSTING IMPACT

Event	FA Ledger	G/L
Acquisition cost	Yes	Fixed asset debited, Bank/Payables credited
Depreciation run	Yes	Depreciation expense, accumulated depreciation
Disposal	Yes (closes)	Gain/loss on disposal recognized

COMMON MISTAKE
Running depreciation before the FA Posting Group and depreciation method are set on the card — the batch posts against whatever default it finds, not what the asset actually needs.

09

Consultant checkpoints before go-live

- ☐ Every posting group combination used by real master data has a G/L account mapped — no blanks.
- ☐ No. Series configured for every document type that will actually be used.
- ☐ At least one full-access and one read-only permission set/role assigned before users log in.
- ☐ Test Posting run across the full purchase and sales cycle, not just the common cases.
- ☐ Costing method decided per item category before the first transaction — it locks after that.
- ☐ Bank account(s) linked for reconciliation if payments will be tracked in the system.
- ☐ Accounting period lock tested and understood before the first real close.
- ☐ Users assigned the Role Center that matches their actual day-to-day job, not a generic default.

BEFORE YOU HAND OVER

Every process in this sheet assumes posting groups already exist and are correct — that assumption is exactly what this checklist exists to verify before a client's first real transaction, not after.
